DETAILED ACTION

Allowable Subject Matter

- 1. The following is an examiner's statement of reasons for allowance:
- 2. Claim 39 is allowable because it has been rewritten in independent form including all of the limitations of the base claim and any intervening claims. Applicant posits that the needle valve "does not meet the limitation of claim 39." Applicant's argument is accepted. The needle valve does not allow for the withdrawal of a sealing element. Page 8, in the paragraph starting at line 6 discloses:

While being brought into the reaction chamber where film formation is performed through a conduit, generated fluorine active species returns to molecules by colliding with the valve that restricts the flow by narrowing a passage, or it is deactivated by reacting with the valve surface. As a result, the amount of fluorine active species declines. Similarly, if piping from the second plasma discharge chamber to the reaction chamber is too long or bends at an acute angle, due to higher contact probability with the piping surface en route or by colliding with the corner portion of the bent piping, the amount of fluorine active species decreases. Decreased fluorine active species lowers the cleaning rate within the downstream deposition chamber and results in insufficient cleaning.

- 3. The prior art of record does not appear to appreciate that the etch rate may be improved reducing the collisions between the species source and the product to be etched by changing the valve type.
- 4. Independent claim 39 and dependant claims 40, and 46-50 are allowed for the reason of record, restated, in part, herein.
- 5. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
